

Try It: Fibonacci 2 Gradient

Part One. Set up the Gradients Editor.

1. Click the “Gradients” button to activate the Gradients Editor.
2. Click and drag across a section of the warp threads to select where you want the Fibonacci 2 gradient to appear.
3. The Gradients popup will now appear.

Part Two. Create your basic gradient.

1. Select your first gradient color by clicking in one of the colored boxes at the top of the Color Editor.
2. Select your second gradient color by clicking in a different colored box.
3. Select the gradient type “Fibonacci 2”.
4. A Fibonacci 2 gradient will now appear in the preview box.

Part Three. Play with your gradient.

1. Slide the Scale slider back and forth to see how it changes the width of the stripes.
2. Click “Reversed” to see how it reverses the order of the stripes.
3. Click “Show Opposite Side” to check out the back side of the gradient.
4. Change the colors around by clicking the color selector boxes at

Warp & Weave

Color courage for weavers

Color Editor

the top of the screen to put new colors into your gradient.

5. Finally, click “Save Colors” to save the colors and transfer the gradient to the main Color Editor, where you can edit it however you like.

Part Four: Continue Playing!

Now you’re familiar with the very basic functionality of the Fibonacci 2 Gradient.

Play around with it! Here are just two things you can try:

1. Do a double Fibonacci 2 Gradient: put one Fibonacci 2 gradient across the entire warp and another across the entire weft.
2. Do a symmetrical Fibonacci 2 Gradient: do a Fibonacci 2 gradient across half the warp, and then do the same Fibonacci 2 gradient across the other half, but with the “Reversed” check box checked off. Now you have a symmetric gradient!

Play around and have fun!
